

Microsoft Systems Center Operations Manager 2007 R2

Course: 0302

Pricing: \$1,350 per person

Overview:

Three days of intensive Operations Manager 2007 R2 training designed and delivered by Microsoft Infrastructure and Security experts, CMS Consulting.

Who Should Attend:

This three day course is essential for anyone who will be or has deployed Operations Manager in their enterprise. People who are considering the upgrade from Operations Manager 2007 to the new R2 version. The hands on training will show students how to design and implement Operations Manager as well as the most common Microsoft and third party management packs (including tuning and customizations).

Benefits:

Operations Manager 2007 R2 allows for end to end monitoring of the enterprise. It is not limited to just Microsoft applications or basic service up or service down scenarios. Operations Manager is cross platform, scalable and flexible.

Objectives:

Provide students with the knowledge and skills to design, implement, and troubleshoot Operations Manager R2. Since customization and tuning of management packs is key to the success of an Operations Manager implementation, we focus detailed discussions and hands on labs on building those skills.

Course Outline:

Day 1

Operations Manager Roles, Database roles and Options

Provide students with an understanding of various Operations Manager Roles.

Installation, Administration, Scaling and High Availability

Examine upgrade / migration possibilities (from

MOM2005 and SCOMSP1 to R2), design considerations, requirements and high availability.

Day 2

Importing Management Packs, Microsoft Management Packs

Process of what occurs when a MP is imported. Teaches students web site and synthetic transaction monitoring.

Tuning Management Packs, DR, Troubleshooting and Security

Continues with the core Microsoft management packs. Also discusses, backup recovery, maintenance, pruning data, troubleshooting.

Day 3

Tuning and customization

Tuning, tuning and more tuning!

This section discusses creating custom management packs to monitor services, event logs and SNMP traps. Time is also spent on distributed applications, one of Operations Managers most powerful tools.

ACS and Reporting

How to design, scale, and implement ACS. Includes best practices and gotcha's. Also teaches reporting capabilities of Operations Manager.
